humquery@sangar.ac.uk clone requests: clonerequest@sangar.ac.uk
on May 25, 2002 this sequence version replaced gi:2020452.
During sequence assembly data is compared from overlapping clones.
Where differences are found these are annotated as variations
together with a note of the overlapping clone name. Note that the
variation annotation may not be found in the sequence submission
corresponding to the overlapping clone, as we submit sequences with
only a small overlap as described above.
This sequence was finished as follows unless otherwise noted: all
regions were either double-stranded or sequenced with an alternate
chamistry or covered by high quality data (i.e., phred quality >=
30; an attempt was made to resolve all sequencing problems, such
as compressions and repeats; all regions were covered by at least
one plasmid sucolone or more than one All subclone, and the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    assembly was confirmed by restriction digest. The following abbreviations are used to associate primary accession numbers given in the feature table with their source databases: Em:, EMBL; Swr; SWISSPROT; Tr:, TREMBL; We:, WORMPEP; Information on the WORMPEP database can be found at
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        ö

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Sequence 31,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Sequence 22, Sequence 9, #

Am Kiopierspitz 18a D-82152 Martinsried, dermany lists is the 5' sequence of the clone insert. Clone from Neleann, Wolecular Genome Analysis, German Cancer Research Center (DKF2), Email s. whemannédkiz-heidelberg.de; sequenced by LMU (Ludwig Maximilians University, Munich/Germany) within the CDNA sequencing consortium of the German Genome Project.

No sl sequence available.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                AL042601 666 bp mRNA linear EST 29-FEB-2000 DKF2p434L0121_ri 434 (synonym: htes3) Homo sapiens cDNA clone DKF2p434L0121 5', mRNA sequence.

(Abb_host="billow (II plage resistant)"

(note="Organ: Brain; Vector: prx-Asc; Site_1: Ecor I;

Site_2: Not I; The library was constructed according,

Bonaldo, Lennon and Soares; Genome Research, 6:791-806,

1996. Denatured RNA was size fractionated on a 1% agarose

gel.First strand cDNA Synthesis was primed with oligo-dI

primer containing a Not I sibe. Double strand cDNA was

size selected according to many size fraction, ligated

with Ecor I adaptor; digested with NoLI and then cloned

directionally inte_prx-Asc vector. The library tag

sequence located between the Not! site and the polyA tail

is CAGCACAGC. This library was dreated for the University

Iowa Brain Anatomy Project (BARP): 'Gene Discovery in the

Developing Mouse Nervous System', seported by National

Institute of Montal Health (NIMH), Hemin Chin, Ph.D.
